NICHOLAS GHONIUS

DKI Jakarta | 082155608918 | nicholasghoniusandy@gmail.com
LinkedIn: www.linkedin.com/in/nicholasghonius-578882292 | GitHub: github.com/nooooooa

PROFESSIONAL SUMMARY

Computer Science student experienced in software development, data analysis, and problem solving. Skilled in Python, C, SQL, React, and Next.js. Currently participating in AI Engineer bootcamp at Dicoding Indonesia focusing on machine learning and AI applications.

EDUCATION

BINUS University

Bachelor of Computer Science

2024 – present

GPA: 3.38

TECHNICAL SKILLS

Python, C, JavaScript, React, Next.js, SQL, Git, GitHub, Data Analysis, Machine Learning Basics

EXPERIENCE

Cafe Sales Data Analysis (Personal Project) | June 2026

- Performed exploratory data analysis (EDA) on a cafe sales dataset using Python, Pandas, and NumPy.
- Cleaned the dataset by handling missing values, removing invalid entries (ERROR, UNKNOWN), converting data types, and eliminating incomplete records.
- Preprocessed transaction data by converting date fields, validating numerical columns, and imputing missing values using statistical methods.
- Analyzed sales performance based on product popularity, payment methods, monthly sales trends, and customer spending patterns.
- Created visualizations using Matplotlib and Seaborn, including bar charts, histograms, boxplots, and scatter plots to identify business insights.

AksaraSense–Indonesian Spelling Error Detection using BiLSTM (AI Engineer, Team Project) | May – June 2026
Tech Stack: Python, TensorFlow, Flask, BiLSTM, NLP, React, Vite

- Prepared and preprocessed Indonesian text datasets, including cleaning, labeling, tokenization, and sequence padding.
- Developed the end-to-end data preprocessing pipeline for training a BiLSTM-based spelling error detection model.
- Performed feature preparation using TensorFlow Tokenizer and generated training-ready datasets.
- Trained and evaluated a BiLSTM model achieving 83% classification accuracy across six spelling error categories.
- Integrated the trained model into a Flask REST API for real-time prediction.
- Collaborated with frontend developers to deploy the application using Vercel and Hugging Face Spaces.

Data Analyst (Project-Based) | April 2026 – May 2026

- Performed exploratory data analysis on the Titanic dataset to examine data distribution, feature relationships, and missing values.
- Visualized survival distribution and feature correlations using Matplotlib and Seaborn to identify key patterns.
- Cleaned and preprocessed the dataset by removing irrelevant features, handling missing values using mean and mode imputation, and validating data quality.
- Encoded categorical variables using one-hot encoding to prepare the dataset for machine learning applications.
- Exported the processed dataset for downstream analysis and predictive modeling.

System Programmer (Project-Based) | Jan 2025 – Feb 2025

- Designed and implemented the game logic for a console-based Tic-Tac-Toe application in C.
- Developed AI opponents with multiple difficulty levels using rule-based decision making.
- Implemented input validation, win/draw detection, and game state management.
- Optimized code structure using modular programming and reusable functions.

Frontend Developer (Project-Based) | May 2026 – Present

- Developed responsive web interfaces using Next.js, React, and Tailwind CSS.
- Built reusable UI components to improve code maintainability.
- Integrated frontend applications with REST APIs.
- Managed application state and routing using React ecosystem tools.
- Collaborated with team members using Git and GitHub through feature branches and pull requests.

CERTIFICATIONS & TRAINING

- Machine Learning for Beginners
- Data Science with Microsoft Fabric
- Basic AI
- Python Programming Fundamentals
- AI Engineer Bootcamp – Dicoding Indonesia
